High-Performance Indexable Carbide Milling Systems

2013 Catalog

"Reprogram your milling expectations."

Table of Contents

Mil-Tec was created to bring the shearing action of traditional solid carbide machining to indexable carbide face & end milling. Along the way, we pioneered and patented the Freedom Cutter® (allowing 3 insert shapes to fit into the same cutter body pocket) and the Mil-Loc (a positioning device allowing 8 indexes on a round insert). We use only the best technology available from throughout the world, combined into a product line that offers the ultimate in milling application productivity. All of our inserts are precision ground and are suitable for use on a diverse range of materials and machine tools. Our toughest task in application training is getting prospective customers to run our product FAST ENOUGH to take full advantage of the Mil-Tec design. Once accomplished, a Mil-Tec customer is usually one for life.

We guarantee your satisfaction. This Company was created with a total "white-paper" approach; there are no compromises regarding performance. Our goal is to delight our customers.

We are extremely proud of Mil-Tec's products, and are confident you will enjoy using it as much as we enjoy manufacturing it.

Sincerely,

David Povich
President

ABOUT THIS CATALOG & PRODUCT LINE: The Mil-Tec product line presentation has been greatly simplified with the addition of EDP numbers. While the "old" nomenclature has been discarded from use in this publication, rest assured it will still appear on packaging and sales documentation. Alongside it will be new EDP #'s and an updated, logic-based numbering system used for Freedom Cutter inserts (see page #10 for more information). Our goal is to make this product line as efficient to understand, sell, purchase, and utilize as it is transferring heat from the workpiece to the chip.

Home of the Freedom Cutter®

Components of Guaranteed Quality

COMPONENT #1: Carbide Substrate From being the first Company to introduce MicroGrain carbide to the mass-market round tool industry through the present day, **Tool Alliance®** has consistently innovated new powder and grade combinations for demanding applications. We recognize that our material is the very first Significant Characteristic. By creating partnerships with a limited number of tungsten powder and cemented-carbide material suppliers, we are able to guarantee that our customers receive precision-tolerance tools ground from only the purest, finest grades available worldwide. The following photograph of **Ultra-Carb® 2** demonstrates the complexity of the compound we commonly refer to as Cemented Carbide. Taken at magnification of 10,000 X through an SEM (Scanning Electron Microscope), the visible grains are tungsten while the cobalt binder appears as dark shadows. The largest tungsten grains appearing in the Ultra-Carb photo are less than one micron in size.

ULTRA-Carb® 1

Cobalt Percentage: 12%
Grain Size (µm): ≤ 1.9
Hardness: 90.2 HRA
TRS (PSI): 540,000
Density (gm/cc): 14.1
Code C1 / K40

ULTRA-Carb® 2

Cobalt Percentage: 10%
Grain Size (µm): ≤ 1.0
Hardness: 91.6 HRA
TRS (PSI): 480,000
Density (gm/cc): 14.5
Code C1 / K30

ULTRA-Carb® 5

Cobalt Percentage: 11.5%
Grain Size (µm): ≤ 1.9
Hardness: 91.0 HRA
TRS (PSI): 350,000
Density (gm/cc): 12.9
Code C5 / P40 / M30

COMPONENT #2: The Grinding Process After selecting the best material available, **Mil-Tec** has perfected the manufacturing technology to optimize 100% of its physical properties. We call this process **SmoothGrind®**. Years in development, SmoothGrind is the result of a proprietary combination of material, abrasive, coolant, machine-tool, software, and grinding method technologies that produce cutting tools with superior qualitative characteristics. Sharper and longer lasting cutting edges, enhanced workpiece finishes, and improved lubricity are just some of the benefits brought to you by the latest indexable carbide rotary tooling advances from Mil-Tec. The following photograph displays a Mil-Tec insert featuring SmoothGrind (bottom) versus a major competitor's product (top). Our 100% precision-ground shearing, positive geometries create cutting forces much more similar to solid carbide milling than traditional pressed and sintered insert milling. Love your machine tool? Love your spindle? Treat them right and lower your maintenance costs at the same time you increase your throughput and improve your part finish.

SHEAR DISBELIEF

OURS Shears material with positive ground geometry **Carries heat off with the chip** Leaves the workpiece cool to the touch

THEIRS Pushes material with pressed geometry **Punishes the workpiece** Punishes the entire machine tool assembly

"REPROGRAM YOUR MILLING EXPECTATIONS"

Competitor's

SmoothGrind®

SmoothEdge®

COMPONENT #3: The Edge Preparation Process

Our cutting edges are literally too sharp for certain materials. For our carbide inserts and now increasingly for our solid carbide round tools, proper edge preparation can yield huge productivity improvements to "out of the box" tool application. Using a treatment we call **SmoothEdge®** and performed on machine tools developed in our own R&D lab, we've taken the mystery out of tool "break-in" and provided a consistency that can be counted on time and again. The process for inserts selects from either **SmoothEdge 1**, a light brush hone, to **SmoothEdge 2**, which doubles the cycle. Both will sound and run smooth from the first cut and protect your tooling investment from unnecessary potential for chipping during your initial tooling paths. Big productivity gains can be achieved in certain applications as well due to improved chip formation and evacuation. In addition, a microblasting treatment using extremely fine aluminum oxide powder is provided with all coated inserts, further prepping the cutting edge. For aluminum grades and certain other non-ferrous materials, we eliminate the process to achieve maximum edge sharpness.

COMPONENT #4: The Tooling Process All the best physical ingredients are wasted unless they are all pulled together in a comprehensive system that maximizes their respective attributes. Mil-Tec calls this process **SmoothContricity®**. Our indexable products are designed to run more like solid carbide end mills versus the traditional pressed & sintered insert. SmoothContricity ensures that optimum results can be obtained by minimizing run-out (TIR), and providing industry-leading tolerances on diameter & radius. Combined, these attributes allow our consumers to reach full machining potential and position the cutting tool as a systematic contributor to process consistency and repeatability. Furthermore, you'll see benefits through the production stream like reduced maintenance costs, more uptime, better part finishes, and more.

SmoothContricity®

Components of Guaranteed Quality continued from Page #3

Our coating @ 2,000X (top).
Everybody else's (bottom).

SmoothCoat®

COMPONENT #5: The Coating Process The challenge of finding a coating method to leverage 100% of the inherent assets of our carbide grade and grinding technologies was difficult. What we finally discovered was such a perfect fit and so logical for our product lines that we invested heavily into the process we now call **SmoothCoat®**. Much more than simply the standard arc-deposited PVD coating, SmoothCoat involves sputter multi-layering and a multi-step prep & post operation called Micro-Blasting. The advantages of this procedure include relieving of tensile stresses underneath the cutting edge, increased stability of the coating surface, and perhaps most importantly, elevating **SmoothGrind** even another notch by leveling and activating the cemented carbide substrate. The result is a smooth, shiny, tough, and durable surface that can withstand tomorrow's machining requirements and outlast competitive coatings. Additionally, we've made it a standard feature on thousands of our standard catalog items. Our coating services are performed within our own factories for quality & extremely quick turnaround times.

The Mil-Tec Freedom Cutter® Plus+ Series

- Superb Accuracy & Strength
- Perfect for all material groups
- New Plus+ Geometry
- Hardened steel
- 3 insert shapes fit each pocket
- Unbeatable versatility
- Torx screw system
- Works with wide range of HP
- Uses precision-ground Freedom Cutter inserts
- From 2" to 12" diameter
- Cuts a 90° shoulder with SA90, SS90, or PS90 insert

The Freedom Cutter system features the ultimate in face-milling versatility. Each cutter body pocket accepts all three insert shapes, and each insert is available in a huge variety of geometries, radius sizes, carbide substrates, hones & coatings. Our cutter bodies are precision machined from hardened steel to exacting, repeatable tolerances. Special pocket geometry allows for eight indexes on Octagon & Round inserts, and four on Square. The Freedom Cutter milling system allows you to maximize your capabilities while minimizing your investment in cutter bodies. Now, the Freedom Cutter features our new Plus+ geometry, offering increased pocket density and superb body strength!

Select a Freedom Cutter Plus+ Shell Mill Style Body:

All Freedom Cutter Bodies are machined in our own modern CNC factory in Fort Myers, FL from special pre-hardened steel to exacting tolerances. We manufacture standards & specials such as metric, coolant-thru, cartridge style, aluminum, or other cutter bodies with lead times as quick as one week.

The Mil-Tec Freedom Cutter® Plus+45 Series

The Freedom Cutter Plus+45 Milling System is a 45° lead angle shell mill that utilizes square shaped Freedom Cutter Inserts. Because our inserts have precision ground geometries ranging from the SA (Super Aluminum) to our workhorse NP grind, the new Plus+45 is the most versatile 45° lead face mill in the industry. The Plus+45 powerful combination of attributes generates maximum metal removal rates in the toughest alloys!

The Plus+45 uses standard Square Freedom Cutter Inserts up to .125 maximum radius.

- 45° lead angle for smooth cut
- Perfect for all material groups including toughest alloys
- Precise tolerances
- Hardened steel
- Accepts standard square Freedom Cutter inserts
- Utilizes FC insert geometry
- Torx screw system
- Depths of cut up to .400
- Unbeatable productivity
- From 2" to 6" diameter

Select a Freedom Cutter Plus+45 Shell Mill Style Body:

All Freedom Cutter Plus+45 Bodies are machined in our own modern CNC factory in Fort Myers, FL from special pre-hardened steel to exacting tolerances. We manufacture standards & specials such as metric, coolant-thru, cartridge style, aluminum, or other cutter bodies with lead times as quick as one week.

Freedom Cutter® Specialty Styles

- Freedom Cutter with Dedicated Round insert (FCDR)
- Freedom Cutter with Low Profile cutter body (FCLP)

The Freedom Cutter is available in customized solutions for difficult milling applications. These specialized cutter bodies utilize the same insert family as all Freedom Cutter series and are precision machined in our factory from tough heat treated steel.

Select a Freedom Cutter with Dedicated Round insert support (FCDR) Cutter Body: new!

This Freedom Cutter style is used only with Round inserts. The pocket is precision machined to perfectly match a round Freedom Cutter insert and utilize our unique Mil-Loc screw system for tight tolerance, high-speed milling utilizing the Round geometry. Cutter diameters are based on the OD of the insert. Insert radius is .312 and features eight indexes.

Round (R)

8 individual indexes

Cutter Diameter	Bore	Keyway	Height	Insert Pockets	FC Dedicated Round Body Part Number	EDP Number	Body List Price USD
2"	3/4	5/16	1.725	3	FCDR-2-3	02170	\$240.00

12"	2-1/2	1"	2"	11	FCDR-12-11*	02180	\$1360.00

* 4" Bolt circle pattern

Utilizing standard Round Freedom Cutter inserts, the FCDR features totally reengineered geometry to maximize performance in Steels, Stainless, Titanium, and a wide range of High-Temp alloys. The round pocket provides increased strength and insert support. New geometry increases the shear angle resulting in increased metal removal rates and longer tool life.

Select a Freedom Cutter with a Low Profile & reduced weight (FCLP) Cutter Body: new!

The Low Profile Freedom Cutter is precision machined from heat-treated steel with reduced body mass and undersized bores for light and medium duty applications on smaller capacity CNC's. Total cutter weight is reduced 40% to 60% dependent upon diameter. The FCLP features the traditional Freedom Cutter pocket and accepts all standard Freedom Cutter inserts.

50%

average weight reduction from traditional Freedom Cutter

Select a Freedom Cutter with integral R8 Shank Style Body:

This Freedom Cutter features a one-piece R8 shank, bringing the versatility of the FC milling system to small shops, maintenance rooms, repair facilities, etc. You'll be amazed at the productivity our free-cutting, positive geometry brings to low-horsepower mills!

Cutter Diameter	OAL	Insert Pockets	FC R8 Shank Body Part Number	EDP Number	Body List Price USD

3"	5-1/8	5	FC8-3.0	02092	\$450.00

Select a Freedom Cutter that Chamfers with Shank Style Body:

This Freedom Cutter style chamfers up to a .600 width with a standard square FC insert. Length is measured to tip of insert, and listed diameter is from front tip of insert to opposing front tip.

new! Sizes & Angles

Included Angle	Cutter Diameter	Shank	OAL	Insert Pockets	FC Chamfer Body Part Number	EDP Number	Body List Price USD

Shell Mill Style

Freedom Cutter® Specialty Styles

The Freedom Cutter is available in customized solutions for difficult milling applications. These specialized cutter bodies utilize the same insert family as all Freedom Cutter series.

- Dedicated Finishing Freedom Cutter (DFCA)
 - Freedom Cutter with Square Insert Support (FCS)
 - Freedom Cutter with Coolant Holes (FCC)
 - Freedom Cutter with Aluminum Body Design (FCA)
- Shank diameter tolerance -.0002 / -.0005

Select a Dedicated Finishing (DFCA) Freedom Cutter (Shank & Shell Mill Styles):

The DFCA Freedom Cutter in conjunction with the required Square NP Geometry (minimum .032 Rad) acts as a dedicated finisher / wiper combination in applications that demand exceptional surface finish and flatness.

Mil-Tec Freedom Cutter® Inserts

Nomenclature Guide & Technical Information

Example: ① Octagon ② Super Shear ③ .062 ④ Ultra-Carb 2 ⑤ SmoothEdge 1 ⑥ TiAlN

Insert Description = **O-SS-062-2-1-TA**, or **OSS06221TA** (every Freedom Cutter Insert has 10 characters total)

Note that the combination of ④ Carbide, ⑤ Edge Prep & ⑥ Coating constitute the **Insert Grade** ("21TA" in this example)

Insert Shape Availability

order as O, S, Z, or R

Octagon (O)

Square (S)

Square 90 (Z)

Round (R)

Each arrow represents a cutting edge index.

Octagon (O) = 8 indexes
Square (S) = 4 indexes
Square 90 (Z) = 2 indexes
Round (R) = 8 indexes

Geometry Availability

order as SS, PS, NP, MS, GP, or SA

High positive grind available in all shapes. Ideal for aluminum, non-ferrous, plastic, & non-metals.

Medium positive grind for steel, stainless, and exotics. The perfect "all-application" geometry.

Strongest insert and designed for heavy feed rates. Ideal for steel, stainless, & heat-treated alloys.

Molded and ground chip control; ideal for stainless & exotics including titanium and inconel.

Flat top grind for all materials.

Maximum high positive grind for milling 90° corner in Aluminum. Available in Square 90 (Z) shape.

Super Shear grind for milling 90° corner available in Square 90 (Z).

Power Shear grind for milling 90° corner available in Square 90 (Z).

Radius Availability

order as 000, 005, 016, 032, 047, 062, 093, 125, 187, 250, or 312

Octagon shape available in 062 only; Round is 312 by default.

Radius =	000	005	016	032	047	062	093	125	187	250	312
decimal	.000	.005	.016	.032	.047	.062	.093	.125	.187	.250	.312
metric	0.00 mm	0.13 mm	0.40 mm	0.81 mm	1.20 mm	1.57 mm	2.36 mm	3.18 mm	4.75 mm	6.35 mm	7.92 mm

Carbide Classification Availability

order as 1, 2, or 5

Toughest Carbide
All applications + Exotics

Hardest Carbide
Cast Iron, Stainless
Low Carbon Steels

Tough + Hard Carbide
Steels, Stainless
Hard materials

Please note that the combination of ④ Carbide, ⑤ Edge Prep & ⑥ Coating constitute the **Insert Grade**, i.e. "21TA"

Edge Prep Availability

order as 0, 1, or 2

No Hone, Upsharp = 0
Razor sharp for max shearing
Plastics, Aluminum, Non-Ferrous

Light Hone = 1
Added edge strength w/high shear
General Purpose for most materials

Heavy Hone = 2
Strongest cutting edge
Exotics, PH Stainless, Heat treated alloys

Coating Availability

order as UC, TA, TN, A1, AT, D1, D2, or TC

UnCoated

Mil-Tec Freedom Cutter® Inserts: Octagon

- SmoothGrind® precision grinding
- SmoothCoat® PVD hard coatings
- 8 indexes for value / .062 radius
- Positive Geometry / free cutting
- 5 Different geometries
- Fits all Freedom Cutter pockets
- 5/8" IC with 3/16" thickness
- Same insert works with Fractional and Metric bodies

Octagon (0)

The Mil-Tec Octagon Freedom Cutter insert features eight indexes and is available in five different precision ground geometries. Inserts are sold in packs of ten.

Octagons feature a .062 radius on all eight indexes.

Note FC inserts are sold in packs of 10.
List prices are for individual inserts.

Mil-Tec Freedom Cutter® Inserts: Round

- SmoothGrind® precision grinding
- SmoothCoat® PVD hard coatings
- 8 indexes for value / .312 radius
- Positive Geometry / free cutting
- 4 Different geometries
- Fits all Freedom Cutter pockets
- 5/8" IC with 3/16" thickness
- Patented Mil-Loc indexing screw
- Same insert works with Fractional and Metric bodies

The Mil-Tec Round Freedom Cutter insert features eight indexes and is available in four different precision ground geometries. Inserts are sold in packs of ten.

Rounds feature a .312 radius on all eight indexes.

Note FC inserts are sold in packs of 10. List prices are for individual inserts. EDP #'s listed below.

OURS Shears material with positive ground geometry
Carries heat off with the chip
Leaves the workpiece cool to the touch

THEIRS Pushes material with pressed geometry
Punishes the workpiece
Punishes the entire machine tool assembly

"REPROGRAM YOUR MILLING EXPECTATIONS"

Mil-Tec Freedom Cutter® Madness & Kits

Mil-Tec offers some of the indexable industry's best sales promotions and, even better, the Madness never ends! Our Madness and Kit programs are available throughout the year and can be applied to our most popular Freedom Cutter body and insert combinations using the following methods:

Madness: Select any Freedom Cutter Plus+, Plus+45, or High Feed cutter body on page #5 or #6 for **\$25 per inch** when purchasing ten Freedom Cutter inserts per inch of cutter body. i.e. 3" FC is \$75 + 30 coated FC inserts @ \$14.50 each = \$510 total cost. Inserts can be mixed in lots of 10 each (pre-packaged quantities).

MADNESS! MADNESS! MADNESS! MADNESS! MADNESS!

Kits: We've taken our most popular sizes and Octagon geometry, included ten inserts, wrenches, extra screws & anti-seize, placed it all in a handy package, and discounted the price.

Mil-Tec's Octagon shape has eight cutting indexes and a .062 radius size.

High positive grind available in all shapes. Ideal for aluminum, non-ferrous, plastic, & non-metals.

Use this Kit for Aluminum

EDP#	02202A1	02203A1	02204A1
Price	\$310.00	\$420.00	\$510.00

#50020A1 Insert w/FC-2-4, FC-3-5/5NS, or FC-4-6

Medium positive grind for steel, stainless, and exotics. The perfect "all-application" geometry.

Use this Kit for Mild Steel & Stainless

EDP#	02205TA	02206TA	02207TA
Price	\$310.00	\$420.00	\$510.00

#60051TA Insert w/FC-2-4, FC-3-5/5NS, or FC-4-6

Strongest insert and designed for heavy feed rates. Ideal for steel, stainless, & heat-treated alloys.

Use this Kit for Alloy Steel & PH Stainless

EDP#	02208TA	02209TA	02210TA
Price	\$310.00	\$420.00	\$510.00

#70052TA Insert w/FC-2-4, FC-3-5/5NS, or FC-4-6

Mil-Tec Freedom Cutter® Facts, Tips & Hints

GRADE: Please note that the combination of Carbide Class, Edge Prep & Coating constitute the insert Grade (i.e. "52AT" or 5-2-AT).

EFFECTIVE CUTTER DIAMETERS: The cutting diameter of your Freedom Cutter will change relative to the cutter body depending upon the shape of the insert selected. When using Square inserts, the cutting diameter will equal the body diameter. When using Octagon inserts, the cutting diameter is reduced approximately 3/8" from the body diameter. When using Round inserts, cutting diameter is reduced approximately 5/8" below the body diameter.

THINGS TO REMEMBER: • Always run Stainless dry (coolant may be used only on very light finishing cuts of .005 - .015)

- SFPM & chip load recommendations are based on 2/3's width of cutter and climb milling
- Recommended depth of cut (DOC) ranges from .025 to .150
- For finishing cuts leave feed rate unchanged but increase RPM by 10% to 30%, with DOC at .015 to .030
- Recommended Speeds & Feeds are starting parameters and may require adjustment dependent upon material & machine condition

LOADING OF 90° INSERTS: When using any 90° insert, ensure that each insert is placed into the pocket with the straight, 90° edge on the periphery of the cutter body (concave edge is down).

USING THE PATENTED MIL-LOC FEATURE FOR ROUND INSERTS: The Mil-Loc keeps Round inserts from spinning under load and ensures 8 indexes. Using the 1/16" hex key included with every cutter, turn the screw from the back side so that the half-dog on the special Mil-Loc screw protrudes about .030". Be sure that the thread of the screw is not above the bottom of the pocket. Place the insert into the pocket so that the matching indents in the back of the insert align with the Mil-Loc screw in the cutter pocket. Tighten the insert normally with the center screw. Be sure to retract the Mil-Loc screw completely when using Octagon or Square inserts.

Commonly Used Formulas:

Surface Feet Minute (SFM) = RPM x Diam. x .262
 Revolutions Per Minute (RPM) = 3.82 x (SFM / Diam.)
 Feed Rate (IPM) = IPT x #teeth x RPM
 Feed Per Tooth (IPT) = IPM / (#teeth x RPM)
 Convert Inches to millimeters: Multiply by 25.4
 Convert millimeters to Inches: Multiply by .03937

See our Metric sizes on pages #25 to #27!
 All metric sizes utilize our standard Freedom Cutter inserts.

Mil-Tec Freedom Cutter® Speeds and Feeds

Speeds and Feeds for the most common material groups plus typical insert selection.
Recommendations based on cut using 2/3rds body width and .150 or less axial depth.
Speed in Surface Feet Per Minute (SFPM). Feed in inches per tooth.

*Grade references the last 4 characters of the complete 10 symbol insert name.

**Feed Rate for Square is low to mid-range; Octagon & Round mid to high-range.

See these EDP#'s for our most popular insert selections sorted by shape and material. These items also feature a 95% + stock availability.

FC Series Specifications: Body Diameter ±.005, TIR with installed insert ±.001

Material	Operating Tips
Non-Ferrous	Our 20UC grade is ideal in aluminum and plastics. The polished surface provides a smooth cutting face with a low coefficient of friction. This grade also features an extremely sharp cutting edge for free cutting in soft or gummy materials. The 20A1 grade includes A1 coating. A1 adds additional lubricity and dramatically reduces chip welding. 20A1 is ideal in low coolant or dry machining applications.
Steels	We feature 2 primary grades for steel alloys, 51TA and 52TA. Both use a wear resistant carbide substrate that has been designed for performance in high heat applications. SmoothCoat TA provides further wear resistance, thermal protection, and lubricity. Our TA (a hybrid version of TiAlN) is well suited for dry machining of steel alloys. The difference between the 51TA and 52TA is the edge preparation; 52TA's heavier hone adds strength in the toughest alloys and heat treated steels, and is effective in reducing edge chipping in applications where vibration is a concern.
Stainless Steel	Variations of stainless steel are immense. 15-5 PH and 440C can be heat treated and have increased hardness. Others such as 304 and 316 will work harden and are gummy to machine. The challenge is to find the optimal combination of hardness and wear resistance that is balanced with toughness to prevent excessive chipping. We offer several grades that feature our SmoothEdge hone and TA coating to obtain the perfect balance.
High Temp	Titanium, Inconel, and other chromium / nickel alloys can be a challenge to machine. They were developed specifically for airframe applications where strength and toughness are primary goals. Insert toughness and wear characteristics are critical due to the slower speeds these materials are machined at. Our 12TA provides an excellent balance of both. For finishing applications, our 52TA can be highly effective due to outstanding wear abilities.
Cast Iron	Materials featuring short chips like cast iron require high cutting edge toughness. Casted materials can feature voids and inclusions that are destructive to cutting tools. Our 22TA and 52TA grades are designed to withstand these attributes. 22TA, the first choice, exhibits great toughness while 52TA has better wear resistance.

The Mil-Tec HV3HD High-Velocity End Mill Series

Heavy Duty, High-Velocity. The new HV3HD is the perfect mix of performance and versatility. The 100% ground and polished insert features both positive axial and radial rake, allowing the HV3HD to literally shear through the toughest materials and allowing the chip to carry away a high percentage of the generated heat. If you've been an APKT user, get ready to step up to the high-performance plate. Let's get started!

- Cuts more like solid carbide than APKT style end mills
- Perfect for all material groups
- Positive Geometry / Free Cutting
- Cuts a 90° shoulder
- PS and SS Geometry
- SmoothGrind® surface polish
- SmoothCoat® PVD hard coatings
- Compatible with our metric radii inserts
- From 5/8" to 1 1/4" diameter range

About our Geometry:

Mil-Tec's Power Shear has higher edge strength than the Super Shear. The Power Shear is engineered for use in steels, stainless, titanium & inconel, while the Super Shear is ideal for aluminum and other non-ferrous material groups. Both geometries are 100% precision ground and feature Tool Alliance's proprietary SmoothGrind® technology for superior cutting edge properties and increased chip lubricity.

Our A1 (TiB2) coating allows for dry machining of many aluminum and non-ferrous applications. Enjoy the cost and environmental benefits of dry machining today!

HV5HD Shell Mill Style

new!

The Mil-Tec HD5.1 HF High Feed End Mill Series

- HV5 Performance in a new High Feed design
- Cuts more like solid carbide than molded style inserts
- Perfect for all material groups
- Positive Geometry / Free Cutting
- GP and PS Geometry
- SmoothGrind® surface polish
- SmoothCoat® PVD hard coatings

Heavy Duty, High Feed. The new HD5.1 HF is the perfect mix of power and versatility. The 100% ground and polished insert features both positive axial and radial rake, allowing the HD5.1 HF to literally shear through the toughest materials and allowing the chip to carry away a high percentage of the generated heat. Both the cutter body and inserts have been re-engineered and optimized for High Feed milling. If you've been a standard ISO insert user, get ready to step up to the High Feed plate. Let's get started!

- Up to .050" Axial Depth of Cut
- Chip Loads up to .040"
- Ideal for 40-Taper CNC's
- Shoulder / Ramp milling
- High Feed capabilities in Steels and:
 - Stainless (up to 400 IPM)
 - Titanium
 - High Temp alloys
 - Cast Iron

SHEAR DISBELIEF

OURS Shears material with positive ground geometry **Carries** heat off with the chip **Leaves** the workpiece cool to the touch

THEIRS Pushes material with pressed geometry **Punishes** the workpiece **Punishes** the entire machine tool assembly

"REPROGRAM YOUR MILLING EXPECTATIONS"

Select an HD5.1 HF Cutter Body:

All HD5.1 HF Cutter Bodies are machined in our own modern CNC factory in Fort Myers, FL from special pre-hardened steel to exacting tolerances. The geometry is optimized for a High Feed design (use HD5.1 HF inserts only). Shank diameter is -.0002 / -.0005

Cutter Diameter	Insert Length	LOR	OAL	Shank Diameter	Insert Pockets	HV5HD Shank Body Part Number	EDP Number	Body List Price USD

About our Geometry:

Mil-Tec's Power Shear has higher edge strength than our Super Shear. The Power Shear is engineered for use in steels, stainless, titanium & inconel, and coupled with the special pocket design of the HD5.1 cutter is the ideal solution for high feed milling. All geometries are 100% precision ground and feature Tool Alliance's proprietary SmoothGrind® technology for superior cutting edge properties and increased chip lubricity.

AT Coating:

Mil-Tec's AT coating is perfect for the high feed roughing of the hard and abrasive materials the HD5.1 HF is designed for and is highly recommended. Our A2 doubles the thickness for increased wear in demanding applications. UC (UnCoated) is displayed for use in apps requiring other special solutions.

The Mil-Tec HV10 High-Velocity End Mill Series

- Perfect for Aluminum, Non-Ferrous Alloys & more
- Positive Geometry / Free Cutting
- Up to .950 cutting length
- Super Shear & Power Shear Geometry
- SmoothGrind® surface polish
- SmoothCoat® A1 TiB2 hard coating for dry machining
- From 1" to 6" diameter range
- Available in both Shank and Shell Mill style bodies
- New Extended Reach Styles!

The new HV10 is the perfect choice for High Velocity, high performance milling in aluminum, non-ferrous alloys, and more. The 100% ground and polished insert features both positive axial and radial rake, allowing the HV10 to literally shear through the work piece material. The long insert length is ideal for deep axial cuts, and also generates a 90° shoulder. A two screw design lends superior holding strength between insert and body. The razor sharp cutting edge generates smooth, clean cuts resulting in excellent part finishes.

About the Mil-Tec HV End Mill Series:

The new Mil-Tec HV (High Velocity) successfully bridges the performance gap between solid carbide end mills and indexable carbide face mills. The combination of positive axial & radial rake geometries, precision & polished grinding, hardened cutter bodies, and SuperNitride PVD hard coatings makes the HV run like a solid carbide end mill, yet the inherent modular makeup allows for flexibility in design, application, and diameter. The HV can be made in special sizes & configurations, including coolant-thru. Call the factory today!

- Positive Axial Geometry = Free cutting with maximized work piece engagement.
- Positive Radial Geometry = Superb chip formation transfers heat away from tool and work piece.
- 100% Precision Ground Insert = Sharp cutting edges, tight tolerances, and excellent coating adhesion.

Applications:

*Note: The HV Series are not designed for plunge milling. Ramp milling or a starter hole are necessary for pocket milling.

The Mil-Tec HD Heavy Duty Series

- Large 1" Insert
- 1/4" Axial DOC
- 8 indexes for Value
- Positive Geometry / Free Cutting
- NP, PS and SS Geometry
- SmoothGrind® surfaces
- SmoothCoat® PVD hard coating availability
- From 2" to 10" diameter range

The Mil-Tec Heavy Duty Series features a huge 1" IC carbide insert for increased capacity and strength. The HD allows for heavier depth of cuts and higher feed rates for max stock removal. Mil-Tec's HD Series Inserts are available in our SS (Super Shear), PS (Power Shear), & NP (Negative/Positive) geometries. The HD Round machines a beautiful 1/2" radius in robust applications.

About our Geometry:

Mil-Tec's Power Shear (PS) has higher edge strength than the Super Shear (SS). The PS is engineered for use in steels, stainless, titanium & inconel, while the SS is ideal for aluminum and other non-ferrous material groups. The Negative/Positive (NP) is a workhorse design for a wide range of applications. All geometries are 100% precision ground and feature Tool Alliance's proprietary SmoothGrind® technology for superior cutting edge properties and increased chip lubricity.

HD Series Spare Parts

Metric Sizes All the power and high-performance of Mil-Tec available in metric sizing.
The Metric Freedom Cutters on this page use our standard FC inserts displayed on pages #10 to #15.

Select a METRIC Freedom Cutter Plus+ Face Mill Style Body:

All Freedom Cutter Bodies are machined in our own modern CNC factory in Fort Myers, FL from special pre-hardened steel to exacting tolerances. We manufacture standards & specials such as Fractional, Coolant-Thru, Cartridge style, aluminum, or other cutter bodies with lead times as quick as one week.

Cutter Diameter	Bore	Keyway	Height	Insert Pockets	FC Plus+ Body Part Number	EDP Number	Body List Price USD
50.0 mm	22 mm	10 mm	43.8 mm	4	FC-50-4-22	05004	\$220.00
63.0 mm	22 mm	10 mm	47.6 mm	4	FC-63-4-22	05005	\$275.00
80.0 mm	27 mm	12 mm	47.6 mm	5	FC-80-5-27	05006	\$345.00
80.0 mm	27 mm	12 mm	47.6 mm	7	FC-80-7-27	05007	\$365.00
100.0 mm	32 mm	14 mm	47.6 mm	6	FC-100-6-32	05008	\$450.00
100.0 mm	32 mm	14 mm	47.6 mm	8	FC-100-8-32	05009	\$480.00

Mil-Tec Specials Capabilities

- Precision 5-axis machining
- CAD design / development
- Fast quotations
- Fast deliveries
- Tight pocket tolerances
- Slotters, Reach, Chamfers, Cartridge, & more

When you need special indexable milling solutions, and you need them fast, Mil-Tec is the answer. We can deliver special cutters incorporating our Freedom Cutter, High Velocity, or Heavy Duty family of inserts in the time it takes the large multinational firms just to return a quotation. We can handle apps for slotting, reach, chamfering, undercuts, coolant-thru, and more, quickly and efficiently, all with traditional Mil-Tec quality.

For quotations, technical support, and application information contact us at (800) 564-5832 or sales@miltecusa.com

Mil-Tec Special Apps

Unique apps utilizing specialty Freedom Cutter and HV Series inserts

Please see Page # 11 to individually select these Freedom Cutter insert styles

• Diamond

Mil-Tec offers a full range of inserts with PCD tips and diamond coatings. These inserts provide maximum wear resistance and lubricity when used in non-ferrous and non-metal applications. Our D1 (PVD Diamond) offers great value and can be applied to any of our inserts. For maximum wear with a coating, select our D2 (CVD Diamond). Lastly, our PCD product offers extremely high wear with mirror finishes.

• Silicon Nitride & Cermet

Mil-Tec's silicon nitride and cermet grades offer a higher level of wear resistance and heat stability than cemented carbide. While still lacking the toughness of carbide, new technology has dramatically increased the durability of these grades. Our silicon nitride is ideal for cast & ductile iron applications, while cermet is targeted for steels and stainless. Please note ground insert geometry selection is limited.

• Wipers

Mil-Tec's wiper inserts can produce smooth workpiece finishes in a wide range of materials. We carry wiper designs in all three Freedom Cutter shapes (square, round, and octagon). A single wiper insert is used in a cutter body array, and each has a single index. Depths of cut range from .005 to .025".

• Aluminum Wipers

Mil-Tec offers a dedicated aluminum wiper designed to provide excellent finishes while performing either roughing or finishing operations. This unique geometry is ground on our square Freedom Cutter insert and features a .032" radius on each index. A .047" wiper flat is blended to the radius and provides surface finishes as low as 15 Ra.

Mil-Tec for Titanium, Inconel, Stainless, Exotics

Mil-Tec's high Positive Geometry and Precision Ground Inserts are ideal for milling exotic materials such as Titanium, Inconel, Stainless Steel, and other High-Temp alloys. And with the huge family of Freedom Cutters and HV Series indexable end mills to select from, your specialized solution awaits. Reprogram your Milling Expectations!

- High Positive Geometry
- Shearing cutting action
- Sharp, strong cutting edge
- Chip retains heat, not work piece
- Reduces "work hardening"
- Highly efficient on 40 taper CNC's

SHEAR DISBELIEF

OURS Shears material with positive ground geometry **Carries** heat off with the chip **Leaves** the workpiece cool to the touch

THEIRS Pushes material with pressed geometry **Punishes** the workpiece **Punishes** the entire machine tool assembly

"REPROGRAM YOUR MILLING EXPECTATIONS"

The Freedom Cutter Plus+ with the Mag-Na-Shear (MS) precision ground insert with chipbreaker.

These 6Al-4V Titanium chips tell the story...

This picture indicates poor chip formation. Dull, torn, and undefined shape indicates poor cutting conditions.

POOR

These chips were sheared with Mil-Tec's Power Shear (PS) insert geometry. Smooth & shiny with a tight curl, this picture indicates a chip formation under ideal cutting conditions.

IDEAL

Precision ground inserts + Positive geometry = Efficient High Speed Machining.

Outstanding qualitative insert characteristics combined with specialized cutters:

SmoothCoat®

Milling exotics requires a world-class PVD hardcoating, and Mil-Tec offers just that with our exclusive SmoothCoat formulations.

Our TiAlN is superb for all applications including wet or dry milling.

Our AlTiN is thicker, has a higher thermal resistance, and is ideal for dry milling.

Our Titanium DiBoride (TiB2) has excellent lubricity and retains edge sharpness; great for Titanium.

SmoothEdge®

Super Shear (SS) geometry with no edge prep: .00016" edge width!

Negative Positive (NP) geometry with SE2: .00129" edge hone for strength.

The Freedom Cutter RPX is the freest cutting design that Mil-Tec offers, with ramp and plunge capability.

The all new Mil-Tec Freedom Cutter Dedicated Round (FCDR) was engineered specifically for milling titanium and high-temp alloys.

The Mil-Tec High Feed cutter is designed for maximum feed rates using our PS90 insert geometry.

Tool Alliance®: Ready, Set, Cut!™

About the brands of Tool Alliance® For more info contact sales@toolalliance.com

We obsess over details that create the finest cutting tools available. Our reward is customer satisfaction via increased factory productivity. We cannot be the best without thinking differently, so over a 45 year operating history we've developed proprietary technologies and brands that yield significant characteristics and designs of cutting tools unlike any you'll find elsewhere:

The world's first web-based design, blueprint, quotation, and ordering system for solid carbide specials brings real time information to cutting tool consumers everywhere on a 24/7/365 virtual basis.

Customize Yourself.™
tungstentoolworks.com

Celebrating 45 years of providing the industry's highest value in solid carbide standards and blueprint specials.

Mil-Tec® Terms & Conditions

Ordering Information: All Mil-Tec® products have an EDP number and a Part number. One or both may be used when entering orders via e-mail or fax (preferred methods), phone, or postal mail communications. If the product is coated, be sure to include the coating suffix.

Availability: Mil-Tec® products are available through select Industrial Distributors, catalog houses, and our website. Locally, your Industrial Distributor can provide communication, technical assistance, and inventory support. Standard products are subject to prior sale.

Pricing: All prices shown are effective March 4, 2013, supersede and cancel all previous listed prices, and are subject to change without notice. The amount of any present or future sales tax, value-added tax, or similar tax applicable to the products listed herein shall be added to the purchase price and paid by the customer. All sales made at list price less standard applicable distributor discount. Contract pricing must be obtained in writing via current quotation, with stated pricing, effective date, and expiration date, to be valid.

Shipping: Preferred carriers are UPS ground services, Federal Express Express Saver (Guaranteed 3-Day), and Federal Express premium services. Prices quoted herein are F.O.B. our shipping warehouses in Fort Myers, Florida, or Huntington Beach, California, U.S.A.

Terms: Domestic and Export Net 30 Days.

Minimum Charge: \$50.00 Net.

Returned Items: Current catalog items are returnable subject to a 25% handling charge and approval by the Mil-Tec® Inspection Department. Credit cannot be issued for any product that has in any way been modified, machined, altered, coated, marked, or displaying other characteristics that render it in a "used" condition. Additionally, as our tolerances, substrate, and grinding methods are continually improved, products purchased two-years or longer prior to return may not be acceptable for credit. A Returned Goods Authorization (RGA) number must be obtained from the Tool Alliance® Sales Department prior to return. Returned product must be sent to the Factory for credit; consignment locations are not capable of issuing either RGA's or credit memos. Special tools are not returnable.

Specials Policy: We reserve the right to overship or undership and invoice special tools up to a 10% variance per item. Quantities under 10 are subject to a one-piece variance. Any variations to this policy must be stated in advance as it will effect pricing upon quotation. Special orders cannot be cancelled without prior approval and proper consideration.

Product Warranty: Mil-Tec® warrants that products sold by it shall be free from defects in materials and workmanship. Mil-Tec will replace, repair, or grant credit for any product which does not comply with this warranty. This warranty does not apply to any products which have been in any way modified, machined, misused, subjected to accident, or used beyond normal life. Warranty claims should be made through the distributor from whom the product was purchased. There are no other warranties, expressed or implied, made by us except as expressed above, and we neither assume nor authorize any other firm or person to assume for it any other obligation or liability in connection with our products.

Cooperative Advertising: Mil-Tec® does not participate in any cooperative advertising programs with either industrial distributors or manufacturer's representatives. This policy allows us to avoid any possible favoritism or conflicts of interest, and keeps costs and sales prices as low as possible.

is friendly to the environment. All paper products are separated for reuse and shredded for packaging materials. Shipping boxes are reused when possible. Conservation programs are in place for reduced energy use (additionally, our coastal locations eliminate the need for artificial heating or cooling on most days). All displaced materials during the manufacturing process are collected, separated, and returned to a materials recycler. Coolants are recycled when appropriate. Mop water is evaporated and resultant sediment is properly disposed. Skylights provide natural lighting and reduce electricity usage.

Visit our factories on your next trip to the greater Los Angeles / San Diego, CA area (solid carbide) or Fort Myers / Naples, FL (indexable). View our automated facilities, meet our Associates, and tell us how we can better grow our relationship together. Huntington Beach is officially "Surf City" with miles of open beach on the Pacific Ocean, and we're minutes away from attractions such as Disneyland, Knott's, Universal Studios, Reagan and Nixon Presidential Libraries, Getty Museum, Dodger Stadium, Staples Center, Angel Stadium, Honda Center, The Tool Alliance Club, and the list goes on. The closest airport is Orange County (SNA), followed by Long Beach (LGB), Los Angeles (LAX), and then Ontario (ONT). Fort Myers (airport code RSW) is on the beautiful Gulf of Mexico coast, a recreational haven, home to Major League Baseball spring training, and within a 3-hour drive to Orlando, Tampa Bay, Sarasota, Miami, Fort Lauderdale, the Everglades, and more.

Mil-Tec® sales features:

- The Company created and patented the Freedom Cutter, allowing square, octagon, and round inserts to seat in the same cutter body.
- Our precision ground carbide inserts provide incredible shearing via positive geometries & work excellent within a wide machine tool spectrum.
- Mil-Tec is dedicated solely to the indexable carbide tooling industry.
- We are privately held, operate with long-term focus and goals, and manufacture 100% of our products within factory buildings that we own exclusively within the USA.
- Our substrate, geometry, and coating are specially selected for each application and Series.
- Our cutting tools have extremely accurate diameter, radius, and concentricity characteristics.
- Our edge prep process provides toughness and strength.
- Our grinding method & coating technology yields an extremely sharp & long-lasting cutting edge.
- We perform in-house, 5-axis cutter body machining and testing.
- We offer proprietary coatings such as A1 (TiB2) and AT (HSN²), all performed in-house for quick delivery.
- Our inserts are also completely proprietary / Non-ISO.
- We can stock firm blanket orders.
- We are able to quickly quote and manufacture print specials.
- Both fractional and metric size ranges are offered.
- We have sales offices in both coastal time zones (Florida and California).
- We have large standard inventories and excellent service levels.
- We strongly support traditional Industrial Distribution.

Always made in the USA.

About the technology of Mil-Tec® and Tool Alliance®:

We obsess over details that create the finest cutting tools available. Our reward is customer satisfaction via increasing their factory productivity. We cannot be the best without thinking differently, so over a forty-year operating history we've developed proprietary technologies that yield significant characteristics of cutting tools unlike any you'll find elsewhere:

- SmoothGrind® = Polished cutting edges for extreme sharpness and lubricity.
- SmoothContricity® = Precision grinding, tool holding, and tolerances for minimized TIR.
- SmoothCoat® = Sputter-based SuperNitride PVD coating for superior surface hardness & uniformity.
- SmoothEdge® = Surface and edge preparation for lubricity and minimized break-in.

Sharpness & Lubricity. No wonder it works better.

Sintered APKT geometry (top) versus
Mil-Tec precision ground (bottom).

SmoothGrind®

Tight tolerances. Minimized run-out.

SmoothContricity®

Our coating @ 2,000X (top). Everybody else's (bottom).

SmoothCoat®

Edge Integrity. Runs great on the first pass.
